CERTIFICATION OF COMPLIANCE

PROJECT NAME Lambert, John H JR. & Newland, Lee Ann DATE May 29, 2015

ADDRESS 108 Hillcrest Avenue

TOWN Township of Neptune STATE NJ ZIP 07753

Home Land Security - FEMA - NFIP - TECH Bulletin 1-93 requirements for engineered openings in foundation walls for FEMA TB 1-93 openings in foundation walls USA FLOOD/AIR VENT will allow for the automatic equalization of hydrostatic flood forces and pressure during flooding as well for base 100 year flood or 1% chance of flooding in FEMA (F.I.R.M. - Federal Insurance Rate Map) in "A" zone type properties. Additional information to meet FEMA / NFIP requirements for flood venting in foundation walls can be found in TB 1-93. I.C.C. (International Code Council) requires a minimum 3" diameter opening to be maintained during flooding to allow passage of debris through flood vent. Additional copies of Certificate of Compliance should be made available to local code official / architect / engineer / surveyor / insurance broker / real estate agent / property owner to show compliance with FEMA/NFIP/ICC.

It is certified that USA FLOOD/AIR FOUNDATION FLOOD VENTS opening are designed for installation in buildings to meet the FEMA, NFIP, ICC code requirements for the equalizing of hydrostatic flood forces on exterior walls by allowing for the automatic entry and exit of floodwater during floods up to and including the base (100 year) flood. One USA FLOOD/AIR VENT, with its single door and frame or double door and frame, will provide sufficient hydrostatic pressure equalization during a flood. Each or 1 vent will cover 250 square feet of enclosed building area as per FEMA, NFIP or ICC instructions and calculations.

The Flexible Elastomeric flap attached to bottom of the bidirectional door has a 40 to 50 Durometer Shore A reading set for a 10 to 15 pound per square foot release at a temperature of -20°F to 80°F.

Re: Elevation Certificate
106 Hillcrest Avenue, Neptune, NJ
Block 471 Lot 15

Dear Ms. Megill,

The Elevation Certificate submitted for the above referenced location does not comply with the requirements of the Revised General Ordinances of the Township of Neptune, Chapter XIX entitled Flood Damage Prevention and the 2009 International Residential Code, New Jersey Edition. Listed below are the violations. You must correct the violations and submit a revised Elevation Certificate demonstrating compliance. Inspections related to the violation may be required from the Construction Department.

The section letters and numbers herein correspond with the Elevation Certificate.

1. Section A7: The Building Diagram Number designation 9 conflicts with the elevations shown in Section C2(a) and (f). Building Diagram Number 9 is for crawl space floors that are below adjacent grade. The lowest floor shown at C2(a) shall be at or above the lowest adjacent grade shown at Section C2(f), which it is.
2. Section C2(e): The elevation of the equipment stated in this section conflicts with the comments in Section D that states the air conditioning unit is at elevation 12.6.

Please do not hesitate to contact me should you have any questions or need further assistance.

Sincerely,

William J. Doolittle
Floodplain Administrator

CERTIFICATION OF ENGINEERED FLOOD OPENINGS (FEMA TB-1 August 2008)

I do hereby certify that the **FLOOD SOLUTIONS LLC** Flood Vent properly installed and sized in accordance with Federal Emergency Management Agency's (FEMA's) National Flood Program regulations is designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for entry and exit of floodwater during floods up to and including the base 100-year flood.

I also do hereby certify that I calculated the Non Engineered Net Free Air and Engineered Opening size for each model and size of FLOOD SOLUTIONS LLC flood vents. The results of the calculations are recorded in the table below. The Engineered size opening calculation was performed using the formula in FEMA Technical Bulletin 1 - August 2008, Openings in Foundation Walls for Buildings Located in Special Flood Hazard Areas in accordance with the National Flood Insurance Program (NFIP) and ASCE/SEI 24-05, Flood Resistance Design and Construction. I measured the Non Engineered Net Free Air by calculating the minimum distance between the top blade and the top of the vent times the clear opening width of the vent; plus the minimum distance between the bottom blade and the bottom of the vent the clear opening width of the vent; plus the minimum distance between each blade times the number of spaces between the blades in vent times the clear opening width of the vent.

I used the formula in TB 1 - August 2008 ($A^0 = 0.033 [1/C] R A^e$) to determine the Engineered Opening size for each model listed below. I used the following assumptions: A^0 = total net area of openings required (in^2); 0.033 = coefficient corresponding to a factor of safety of 5.0 ($\text{in}^2 \text{hr}/\text{ft}^2$); c = 0.40 opening coefficient (ASCE 24 Table 2-3 "rectangular, long axis horizontal, short axis vertical unobstructed during design flood") or $C = 0.35$ (square unobstructed during design flood); $R = 5 \text{ ft/hr}$ worst case rate of rise and fall; and $A^e = 1 \text{ ft}^2$ total enclosed area.

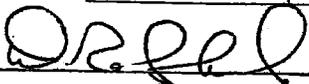

Note: When the horizontal dimension is twice or more the vertical dimension, use 0.4; as the dimensions approach a square, interpolate from 0.4 to 0.35.

$$A^0 / A^e = 0.033 [1/C] R = 0.033 [1/0.40 \text{ for rectangle, long axis horizontal}] 5 = 0.4125 \text{ in}^2 \text{ per ft}^2$$

$$\text{or } A^0 / A^e = 0.033 [1/C] R = 0.033 [1 / 0.35 \text{ for square}] 5 = .4719 \text{ in}^2 \text{ per ft}^2$$

Each individual opening, and any louvers, screens, or other covers, shall be designed to allow automatic entry and exit of floodwaters during design flood or lesser flood conditions; there shall be a minimum of two openings on different sides of each enclosed area; if a structure has more than one enclosed area below the DFE, each area shall have openings; openings shall not be less than 3 inches in any direction in the plane of the wall; the bottom of each required opening shall be no more than 1 ft. above the adjacent grade; the difference between the exterior and interior floodwater levels shall not exceed 1 ft. during base flood conditions; in the absence of reliable data on the rates of rise and fall, assume a rate of rise and fall of 5ft/hr; where data or analysis indicated more rapid rates of rise and fall, the total net area of the required openings shall be increased to account for the higher rates of rise and fall.

SECTION D – SURVEYOR, ENGINEER, OR ARCHITECT CERTIFICATION (CONTINUED)

Copy both sides of this Elevation Certificate for (1) community official, (2) insurance agent/company, and (3) building owner.

Comments Structure is a one story frame and dwelling built above a masonry crawl space. The house was damaged in Hurricane/super-storm Sandy. There are no mechanical systems operating in the house at this time. The crawl space was inaccessible, therefore a measurement was taken through a hole in the floor to determine the crawl space elevation. Due to same, this elevation was assumed to be uniform throughout.
