

## **Energy Code Compliance Information**

Provide energy code compliance certification or calculations (four methods of compliance available). Submissions must be signed and sealed by the designer of the structure. Calculations for Class III structures may be signed by the mechanical contractor.

*Note:* Basement walls must be insulated or, provide a 90% AFUE furnace or an 86% AFUE boiler. [1995 CABO Model Energy Code].

Methods: see [www.energycodes.gov](http://www.energycodes.gov) for (Method 1) on line software or (Method 2) prescriptive packages. (Method 3) See the Appendix of the 1993 BOCA National Energy Conservation Code for assistance with calculations or, (Method 4) contact your utility company for Energy Star Program information.

Submit the enrollment form for permit approval.
